

FACIAL WAXING

Facial Waxing leaves your skin soft, smooth and hair free. Proper Before and Aftercare helps ensure you have the best results.

BEFORE YOUR WAXING

- Make sure you have reviewed the contraindications for waxing to ensure you are an appropriate candidate
- Hair must be at least 0.5cm long for waxing removal
- Keep the area to be waxed hydrated prior to service
- Tylenol can be taken about 30 minutes before your appointment if you have never had a wax before or find the process uncomfortable.

AFTERCARE

- Apply a cool compress or take a cool shower to reduce irritation and sensitivity.
- Avoid hot baths or showers.
- Avoid perfumed products, lotions, and creams, which can irritate sensitized skin
- You can apply aloe vera or an over-the-counter cortisone cream to reduce inflammation
- Avoid excessive activity for 24 hours after waxing. Perspiration can irritate freshly waxed skin.
- Many people develop mild bumps and inflammation after hair removal, this usually clears up in a few days.
- Between waxes, cleanse and exfoliate regularly. Removing dead skin and other debris can help release embedded hair and prevent additional ingrown
