MICRONEEDLING BEFORE & AFTERCARE

Microneedling devices intentionally create very superficial “micro-injuries” to the outermost layer of the skin, inducing the healing process including new collagen production. Microneedling has been shown to reduce the visibility of acne scars, fine lines, and wrinkles, diminish hyperpigmentation, and improve skin tone and texture, resulting in smoother, firmer, younger-looking skin. Skin needling treatments are performed in a safe and precise manner with the sterile devices and are normally completed within 30-60 minutes, depending on the selected area.

BEFORE YOUR MICRONEEDLING

- No Retin-A 24 hours prior to your treatment.
- No auto-immune therapies or products 24 hours prior to your treatment.
- No prolonged sun exposure to the face 24 hours prior to your treatment. A Microneedling treatment will not be administered on sunburned skin.
- On the day of the treatment, please keep your face clean and do not apply makeup.
- If you are taking a blood thinner, aspirin or any other medication that you have the propensity to bleed easily while on, please tell your technician. If you are under a physician’s care and need to discontinue your medication for a few days, always ask your physician prior to each Microneedling appointment.
- If you are planning to receive Botox, make sure that you give yourself at least 2 weeks post Botox injections before receiving your Microneedling procedure.
- If an active or extreme breakout occurs before treatment, please consult your practitioner.
- Wait 6 months following oral isotretinoin use.

AFTERCARE

- Immediately after your treatment, you will look as though you have a moderate to severe sunburn and your skin may feel warm and tighter than usual. You may also notice some slight swelling, both are normal and should subside after 1 to 2 hours and will normally diminish within the same day or 24 hours. You may see slight redness after 24 hours but only in minimal areas or spots.
- If you are concerned about any reaction, please call our office and contact your healthcare provider immediately.
- Use tepid water for the initial 24 hours to rinse the treated area. After 24 hours, use a gentle cleanser to cleanse the face for the following 72 hours and gently dry the treated skin. Always make sure that your hands are clean when touching the treated area.
- Apply a recommended moisturizer over the next 24 hours.
- Do not take any inflammatory medicines for at least 2 weeks post treatment.
- It is recommended that makeup or sunscreen should not be applied for 24 hours after the procedure. Do not apply any makeup with a makeup brush, especially if it is not clean.
- After the initial 24 hours, apply a broad spectrum UVA/UVB sunscreen with a minimum SPF 30 for two weeks. A chemical-free sunscreen is highly recommended.
- For at least 3 days post treatment, do NOT use any Alpha Hydroxy Acids, Beta Hydroxy Acid, Retinol (Vitamin A), Vitamin C (in a low pH formula) or anything perceived as 'active' skincare.
- Avoid intentional and direct sunlight for 48 hours. No tanning beds.
- Do not go swimming for at least 24 hours post-treatment.
- No exercising or strenuous activity for the first 24 hours post-treatment. Sweating and gym environments must be avoided during the first 72 hours post-treatment.
